THE ESSENTIAL LINK BETWEEN
OEM AUDIO & AFTERMARKET
POWER

SIGNAL PROCESSORS

The essential solution for enhancing your audio system

Many vehicles now have integrated amplifiers, but the original OEM system often lacks performance. Replacing the entire audio system can be costly and impractical. That's where our Line Output Converters (LOC) come in. Our LOC converters offer distortion reduction and seamless integration of aftermarket audio components into your OEM system.

ZLOC2.2 and ZLOC4.4 have 7.5V output on the RCAs, preventing noise in the signal chain and allowing for a stronger and cleaner signal from the ZLOC to the amplifier. This will improve the sound quality of your amplifier and provide maximum output.

ZLOC2.2

2-Channel Line level converter with advanced Bass enhancement
ZLOC2.2 has two inputs that take the speaker signal from the OEM unit or amplifier and convert it to a low-level output. This allows you to add an external amplifier and install an aftermarket subwoofer or speakers.

ZLOC2.2 has a built-in CLIP indicator that flashes when it detects distortion on the input or output signal. This helps you easily identify signal distortion and adjust the output without any clipping for a distortion-free signal.

4-Channel Line level converter with our legendary Bass CUBE technology
ZLOC4.4 has four high-level inputs that convert the speaker signal from the OEM headunit or amplifier to four low-level outputs, enabling you to add external amplifiers and install aftermarket subwoofers or speakers.

ZLOC4.4 has a built-in CLIP indicator that flashes when distortion is detected on the input or output signal and allows you to easily identify input signal distortion and adjust the output signal to ensure a clean, distortion-free signal throughout.

Seamless Integration, Superior Audio Upgrade

The ZD-Series is designed for effortless integration into modern vehicles, delivering premium audio upgrades without compromise. As pioneers in OEM integration, we offer cutting-edge direct speaker, amplifier, and DSP amplifier upgrades that adhere to OEM installation standards ensuring a non-destructive fit with no need for vehicle modifications.

PHOENIX GOLD

THE ORIGIN

Phoenix [fe'niks] ... An Egyptian Myth. A bird that has lived for 5,000 years, then sets itself on fire, rising and reborn from the ashes, also thought in later years to come from Greek mythology. It was said that only one phoenix existed at any one time, and it is very long-lived with a life span of 500 years, 540 years, 1000 years, 1461 years or even 12,994 years (according to various accounts).

As the end of its life approached, the Phoenix would build a pyre nest of aromatic branches and spices such as myrrh, set it on fire, and be consumed in the flames. After three days, the birth-or, as some legends say, a rebirth-the Phoenix arises from the ashes. According to some sources, the Phoenix arose from the midst of the flames, the rise of the Phoenix. There are Chinese, Japanese, Russian, Egyptian, and Native American counterparts of the Phoenix. (Fêng-Huang, Ho-oo, Firebird, Benu, and Yel, respectively). All of these birds are identified with the sun.

As an accessories brand, Phoenix Gold started around 1985 with Keith Peterson, who made wire and other accessories for mobile and home audio applications. Some of their first products included VHS tape rewinders, VHS player covers, car audio power wires, car audio interconnect cables, and other car audio installation accessories. They introduced their first line of mobile amplifiers around 1990 with the MS-250 and MS-2125. These amplifiers had circuit boards that were 24K gold plated, which helped give the company a reputation for producing high-quality products. Shortly thereafter, they released the MQ-430, followed by the launch of the M series (M25), and then all other MS and M series amps were to follow.

Starting in the early 90s, Phoenix Gold made some very special amps. The first limited edition amplifier (Frank Amp 'n Stein) resulted from a customer requesting that two amplifiers be put on a single heat sink. According to the original designers, once the request was made and the project received a green light, his creative ideas started to flow. They decided to use the MQ-430 and MS-2125 because they had about 100 leftover MQ-430 boards (they were not very popular) and decided to pair them with their most popular 2-channel model
